**A. Mission Description and Budget Item Justification**

The Manufacturing Technology (ManTech) program is intended to improve the productivity and responsiveness of the U.S. defense industrial base by funding the development and transition of leading edge manufacturing technologies. The ManTech program is executed through a Center of Excellence (COE) strategy. A majority of the COEs are consortium based with only a small group of technical and management personnel at the center. ManTech projects are primarily performed by industry participants that bill the COE which, in turn, bills the Navy which causes a non-traditional financial execution profile for the program. The program therefore does not meet traditional execution benchmarks. The ManTech program, by providing seed funding for the development of moderate to high risk process and equipment technology, permits contractors to upgrade their manufacturing capabilities. Ultimately, the program aims to produce high-quality weapon systems with shorter lead times and reduced acquisition costs.

Due to the number of efforts in this PE, the programs described herein are representative of the work included in this PE.

**A. Mission Description and Budget Item Justification**

The ManTech Program is intended to improve the productivity and responsiveness of the U.S. defense industrial base by funding the development of manufacturing technologies. Major areas of endeavor both underway and planned include: advanced manufacturing technology for metalworking, joining, electronics and electro-optics, composites, shipbuilding, and above-the-factory-floor business operations technology. The ManTech Program is aimed at assisting acquisition programs in meeting performance and affordability goals by inserting manufacturing process solutions early into the design phase.

| B. Accomplishments/Planned Programs ($ in Millions, Article Quantities in Each) | FY 2010 | FY 2011 | FY 2012 |
|---|---|---|---|
| ***Title:*** COMPOSITES PROCESSING AND FABRICATION | 6.000 | 6.000 | 6.000 |
| ***Articles:*** | 0 | 0 | 0 |

***Description:*** The primary technical goal of the Composites Processing and Fabrication activity is improving weapon systems affordability, enhancing weapon system effectiveness and improving reliability / war-fighter readiness through the increased utilization of composite materials and structures. This is being achieved through the development and maturation of affordable, robust manufacturing and assembly processes that fully exploit the benefits of composite materials. Concentration is on composites processing for the following four platforms: DDG-1000, CVN-21, VCS, and LCS although ManTech will continue to develop composites manufacturing technology for high priority air platforms.

***FY 2010 Accomplishments:***

- Continued Composite Materials and Process Improvement Thrust for VCS Shipbuilding Affordability Initiative. Includes continuation of efforts to develop/optimize composite materials fabrication technology for reduced cost VCS construction.
- Continued Composite Materials and Process Improvement Thrust for DDG-1000 Shipbuilding Affordability Initiative.
- Continued Composite Materials and Process Improvement Thrust for CVN-21 Shipbuilding Affordability Initiative.
- Continued Composite Materials and Process Improvement Thrust for Air Platforms. Included continuation of efforts to develop/ optimize composite materials fabrication technology for reduced cost Air Platform construction.
- Completed DDG-1000 Radomes Affordability.
- Completed other composites thrusts (formerly projects) to address improvements/affordability of DDG-1000, CVN-21, VCS, and other acquisition program offices.

***FY 2011 Plans:***

- Continue Composite Materials and Process Improvement Thrust for VCS Shipbuilding Affordability Initiative. Includes continuation of efforts to develop / optimize composite materials fabrication technology for reduced cost VCS construction.

| ***Title:*** CORPORATE INVESTMENTS | 10.646 | 5.663 | 10.297 |
| ***Articles:*** | 0 | 0 | 0 |
| ***Description:*** The Corporate Investments activity is focused on accelerating defense industrial enterprise progress toward implementation of world-class industrial practices as well as advanced design and information systems that support weapon system development, production, and sustainment. Key emphasis areas include: 1) Benchmarking and accelerating the implementation of world-class industrial practices throughout the contractor base; 2) Demonstrating and validating advanced business practices and information technologies capable of streamlining management functions in all industrial base tiers; and 3) Leveraging information technologies in pursuit of tighter coupling of all defense industrial enterprise elements. Corporate Investment efforts create improvements to cost and cycle time for weapon system development, production, and repair. Additionally, Corporate Investments include the funding of recently identified near-term high priority shipbuilding affordability efforts for the four major platforms - DDG-1000, CVN-21, VCS, and LCS. The funding decrease from FY 2010 to FY 2011 will result in the elimination of several high payoff ship reduction efforts supporting LCS and VIRGINIA Class submarines. Moreover, planned work such as developing pervasive technology for improved supply chain management and model based ship production will be reduced.<br><br>The reduction of funding from FY10 to FY11 reflects programmatic realignments to other Navy priorities. The increase from FY11 to FY12 reflects funding alignment back to manufacturing priorities.<br><br>***FY 2010 Accomplishments:***<br>- Continued Near-Term High Priority Shipbuilding Affordability Thrust for CVN-21. | | | |

**C. Other Program Funding Summary ($ in Millions)**

N/A

**D. Acquisition Strategy**

Efforts are focused on shipbuilding affordability reduction for the following the Integrated Systems Investment Strategy platforms: DDG 1000, CVN 21, Littoral Combat Ship (LCS), and the VIRGINIA Class Submarine (VCS) as well as more limited efforts for aircraft / other programs.

**E. Performance Metrics**

The ManTech program's overall goal is to transition production technology to reduce the cost of Navy weapons systems. Metrics are currently collected on the cost savings per hull and for the class for each of the 4 primary shipbuilding platforms, DDG-1000, CVN-21, LCS and VCS.

| ***Articles:*** | 0 | | |
| ***Description:*** Funding supports research and development efforts as directed under Section 219 of the fiscal year 2009 Duncan Hunter National Defense Authorization Act.<br><br>***FY 2010 Accomplishments:***<br>Section 219 (Naval Innovative Science and Engineering) included in the FY 2009 Duncan Hunter National Defense Authorization Act, established mechanisms whereby the director of a naval laboratory may utilize up to three percent of all funds available to the laboratory to sponsor individual projects for:<br><br>1. Innovative basic and applied research that is conducted at the laboratory and supports military missions;<br>2. Development programs that support the transition of technologies developed by the defense laboratory into operational use;<br>3. Development activities that improve the capacity of the defense laboratory to recruit and retain personnel with needed scientific and engineering expertise; and<br>4. The revitalization and recapitalization of the laboratories. | | | |
| **Accomplishments/Planned Programs Subtotals** | 0.391 | - | - |

**C. Other Program Funding Summary ($ in Millions)**

N/A

**D. Acquisition Strategy**

Not applicable.

**A. Mission Description and Budget Item Justification**

Congressional interest items not included in other projects.

| B. Accomplishments/Planned Programs ($ in Millions) | FY 2010 | FY 2011 |
|---|---|---|
| ***Congressional Add:*** Laser Optimization Remote Lighting System<br>***FY 2010 Accomplishments:*** This effort investigated laser light sources for remote source lighting currently used aboard the LPD 17 and the DDG1000 classes. The research concentrated on optimizing three areas: (1) the light source; (2) the fiber cable; and (3) the luminaire to meet the broadest range of high interest applications. | 1.992 | - |
| ***Congressional Add:*** Weps Sys Life Ext Program<br>***FY 2010 Accomplishments:*** This effort determined the requirements and feasibility of using emerging materials processing technologies to repair Navy system components and structures to reduce life-cycle maintenance costs and extend the structural life of legacy and future weapons systems. Friction stir welding processes were identified to reduce life cycle costs and the linkage with the NAVICP was established to pilot the implementation for high priority parts. | 2.490 | - |
| ***Congressional Add:*** Low Acoustic and Thermal Signature Battlefield Power Source<br>***FY 2010 Accomplishments:*** This effort researched, developed, and constructed a durable, low acoustic and low thermal signature battlefield power source utilizing advanced fuel cell technologies which support U.S. Navy operational requirements. Best practices that enable the manufacturing and development of durable fuel cells with low acoustic and thermal signatures were identified and documented, additionally, roadmaps were developed related to the manufacturing and fabrication of fuel cells to ensure that future research will meet high priority Navy needs as it relates to battlefield power sources. | 3.187 | - |
| ***Congressional Add:*** Manufacturing S&T for Next-Generation Energetics<br>***FY 2010 Accomplishments:*** This effort designed and developed safe and cost-effective manufacturing processes for next generation energetics and their associated systems. Investment in the development of new manufacturing processes is required for the military to safely produce the new, superior explosives and propellants that it will use in future conflicts. | 4.979 | - |

| B. Accomplishments/Planned Programs ($ in Millions) | FY 2010 | FY 2011 |
|---|---|---|
| - Developed improved manufacturing techniques to more affordably and repeatably produce the energetic system of the Microelectronic-Mechanical system (MEMS) fuze.<br>- Developed continuous low-cost production process for Butyl-NENA, Methyl-NENA, and Ethyl-NENA to support propellant production programs.<br>- Developed a manufacturing capability using Twin Screw Mixing/Extruder technology to produce PBXN-18 explosive for loading into the M72A9 & M72E19 warheads for Marine ground forces in shoulder launch applications. | | |
| ***Congressional Add:*** Next Generation Scalable Lean Manufacturing Initia<br>***FY 2010 Accomplishments:*** This effort addressed the manufacturing issues associated with large scale automated production of Navy products under 60 meters long, focusing on modular molding, rapid reconfigurable tooling, and time reduction/process improvement through automation. The project also developed seal technologies that will allow for modular molding, a necessary step to process large structures in an automated cell, and rapid prototyping techniques were utilized to reconfigure a tool while maintaining geometric tolerances through a heating cycle. | 2.390 | - |
| ***Congressional Add:*** Out of Autociave Composite Processing<br>***FY 2010 Accomplishments:*** This effort focused on developing processes using fiber placement and other automated techniques on next-generation out-of-autoclave composite material prepreg systems for current and future aircraft platforms. The result will be lower cost aircraft components. Completed the final interactions of the 8-D Taguchi design of experiments matrix to identify the interaction of process variables on fiber placed Out-of-Autoclave (OOA) laminates and initiated fabrication and testing of OOA panels. | 1.992 | - |
